Partner with us and ignite your students'
passion for technology!

Assignment 1

Write a C code that define 3 int variables x, y and z and 3 pointers to int p, q and r. Set x, y, z to three distinct values. Set p, q, r to the addresses of x, y, z respectively. 1. Print with labels the values of x, y, z, p, q, r, *p, *q, *r 2. Print the message: Swapping pointers. 3. Execute the swap code: r = p; p = q; q = r; 4. Print with labels the values of x, y, z, p, q, r, *p, *q, *r

Assignment 2

Write a C code that defines a function which takes an array as input argument and apply the bubble sorting algorithm on it, then print the result.
