Assignment

1-LED Control

Objective :

Control the 8 LEDs using the DIP switches.

Instructions:- Connect each DIP switch pin to the microcontroller. - When a DIP switch is turned on, the corresponding LED should light up. When the switch is off, the LED should be off.

2-Counter with Push Buttons and Seven-Segment Display

Objective: Implement a counter that increments and decrements with a button press. Instructions: -

Use one push button to increment a counter value. - Use another push button to decrement the counter value. - Display the counter value on the seven-segment display. - The counter should reset to 0 after reaching 9. - The counter should reset to 9 after reaching 0.

Note : Using the DIO driver
